达芬奇-不只是画家

Da Vinci - More Than Just a Painter

1452年，达·芬奇出生于意大利中部，他的家庭十分富有。14岁时，他进入了一个画画的学校，在这里，达芬奇学习了十年。

在画人体时，达·芬奇和其他的画家很不同，他不仅研究人体的外面的样子，还认真地了解人体身体里面的结构。而且，他对光学、物理学、动物和植物都非常感兴趣。因为他有多个学科的知识，所以他真正地做到了“认识自然，再用画笔画出自然”。1482年，30岁的达·芬奇离开佛罗伦萨，他一个人做了多个人的工作，他是工程师，也是建筑师，同时，他也是一个画家。但是，由于他的工作太多，他真正画完的画其实没几幅，很多都是画了一半，他又跑去做其他事情了。他一直不停地观察身边的事，不停地思考。有人说，他并不是想画完一幅画，画画只是他思考的过程。1500年，他回到佛罗伦萨。他十分专心地研究数学和科学。那段时间他几乎没有画画，画的都是关于科学的草图。

达·芬奇64岁的时候去到法国，因为得到了国王的支持，他能更专心地研究科学。1519年，达·芬奇去世时，他在国王面前说，我还没有完成我想做的事情。

In 1452, Leonardo da Vinci was born in central Italy, and his family was very wealthy. At the age of 14, he entered a painting school where Da Vinci **studied for ten years**.

When painting the human body, Da Vinci was very different from other painters. He not only studied the external appearance of the human body, but also carefully understood its internal structure. Moreover, he was very interested in optics, physics, animals, and plants. Because he possessed knowledge across multiple disciplines, he truly achieved "understanding nature and then painting nature with a brush." In 1482, 30-year-old Da Vinci left Florence. He did the work of multiple people alone; he was an engineer, an architect, and simultaneously a painter. However, **due to** having too many tasks, he actually finished very few paintings—many were left half-done while he rushed off to do other things. He constantly observed things around him and thought incessantly. Some said he didn't really want to finish a painting; painting was merely his process of thinking. In 1400 (1500), he returned to Florence. He concentrated deeply on researching mathematics and science. During that time, he barely painted, producing mostly scientific sketches about various subjects.

When Da Vinci was 64 years old, he went to France. With the king's support, he was able to focus more intently on scientific research. In 1519, when Da Vinci passed away, he told the king that he had not yet completed what he wanted to do.
